

Custom Solutions

Software designed around your process-not the other way around.

When a packaged product cannot represent your workflow, we map the process, define controls and build a maintainable business application around your actual operation.

Custom ERP

Web Applications

API Integration

Workflow Automation

Mobile-Friendly UI

Designed for practical business operations

Suitable for organizations with specialized operations, legacy systems or workflow requirements that standard software cannot cover.

Who it is built for

Suitable for organizations with specialized operations, legacy systems or workflow requirements that standard software cannot cover.

Growing Businesses

Replace spreadsheets and disconnected tools.

Manufacturers

Model specialized production and stock processes.

Service Organizations

Automate requests, approvals, delivery and billing.

Legacy Software Users

Modernize or extend existing data and workflows.

Core modules

The final scope is derived from process discovery, data design and operational control requirements.

Process Discovery

Map users, transactions, approvals, exceptions and reports.

ERP Architecture

Design masters, documents, ledgers, workflow states and audit trails.

Application Development

Responsive web interfaces, APIs, automation and integrations.

Data Migration

Map, validate, import and reconcile legacy data.

Roles & Security

Permissions, approvals, logs, validation and data protection.

Deployment & Support

Testing, training, go-live assistance and managed enhancements.

Connected workflow

A controlled delivery process from requirement to production use.

We reduce ambiguity before development and validate the system against real operational scenarios.

Step 1: Discover

Understand present process, pain points and success criteria.

Step 2: Design

Define scope, data model, roles, screens and reports.

Step 3: Build & Validate

Develop in phases and test with real examples.

Step 4: Deploy & Improve

Migrate, train, go live and prioritize enhancements.

A maintainable solution with clear business logic and ownership.

Custom development is valuable when the process definition, controls and future change path are treated as part of the product.

- Workflow-specific masters and transactions
- Role-based permissions and approval states
- Responsive interfaces for desktop and mobile
- Third-party API and messaging integration
- Legacy data migration with reconciliation
- Phased release and post-go-live support

Custom ERP and workflow automation when packaged software does not fit

Custom Solutions is for organizations whose approvals, data structures, field processes, integrations or reporting rules differ materially from standard software. We map the workflow first and then build a maintainable web-based system around the actual business process.

Frequently asked questions

Can the system be customized for our workflow?

Yes. The implementation can include company-specific masters, approvals, print formats, reports and integrations after requirement mapping.

Can it be used on mobile devices?

The web interfaces are designed to be responsive. Device suitability depends on the module, scanning method and printer integration required.

Is data migration available?

Migration can be planned from spreadsheets or an existing system after checking data quality, mapping rules and reconciliation requirements.

How is implementation handled?

We begin with discovery and process mapping, configure the system, validate with sample data, train users and then move to controlled go-live.

Next step

Share your current workflow, users, locations, devices, print requirements and reporting priorities. Alltrim Solutions can then demonstrate the relevant product flow and identify configuration, migration and integration requirements.
